

113

SUM of Elements of Array using pointers

```
int main() {
```

```
    int a[] = {11, 12, 35, 5, 2}
```

```
    int sum, *p;
```

```
    for (int p = &a[0]; p <= &a[4]; p++) {
```

```
        sum = sum + *p;
```

```
    }
```

```
    printf("Sum = %d", sum);
```

```
    return 0; }
```

works simply as normal for loop.

~~&a~~ &a[0] → &a[n]

main thing to notice
